SUMMARY

Backend Software Engineer with 3.8 years building production systems across fintech and e-commerce. Strong hands-on experience with Spring Boot, REST APIs, Spring Data JPA, Hibernate, asynchronous processing, authentication and authorization, and enterprise integrations. Experienced building supply-chain finance and lending workflows, securing backend applications, and delivering modules from implementation through testing and release.

EXPERIENCE

Associate Software Engineer — Vivriti Capital

Mar 2025 – Present · Chennai, India

- Owned backend development for an internal Supply Chain Finance (SCF) platform used by operations teams, independently designing and building all feature modules — counterparty onboarding and verification, penny-drop validation, loan origination (LOS) and disbursement, supplier/dealer onboarding, invoice processing, credit bureau (CIBIL) checks, and document management — using Java and Spring Boot within an existing microservices-based command-handler architecture with asynchronous module/action APIs.
- Designed counterparty onboarding workflows covering create, verify, and approval flows, including IFSC and account validation, duplicate checks, credit-limit resolution, and asynchronous penny-drop verification with configurable retries and scheduler-driven enquiry processing.
- Owned backend development end-to-end for a separate customer-facing supply-chain finance portal serving both anchor and counterparty users, applying system design principles to architect REST APIs for authentication, user administration, dashboards, invoices, asynchronous loan booking, transactions, and reporting — including AI-powered invoice OCR and a customer support chatbot built using AWS AI services.
- Implemented a custom authentication and authorization stack (JWT validation integrated with Keycloak, cookie-based sessions, rate limiting, CSRF/XSS protection, AES-GCM encryption) and dual persistence across MariaDB for transactional data and MongoDB for audit, session, and notification data.
- Integrated external platforms via OpenFeign with Resilience4j circuit breakers, added in-process caching, and wrote unit and integration tests (JUnit 5, Mockito, MockMvc) to safeguard critical workflows.

Stack: Java, Spring Boot, Spring Data JPA, Hibernate, MariaDB, MySQL, MongoDB, JWT, Keycloak, OpenFeign, Resilience4j, Caffeine, Microservices, AWS AI Services, Docker, Git

Software Engineer (Trainee → Associate) — Grid Dynamics (Nasdaq: GDYN)

Feb 2023 – Feb 2025 · Chennai, India

- Built backend applications during initial training and progressed to developing backend services for Forever Living Products' global e-commerce platform, contributing to Customer and Order Management microservices across the order lifecycle using Java, Spring Boot, Spring Data JPA, and MySQL.
- Designed and extended REST APIs supporting order processing and customer management, using Kafka for asynchronous order-event flows between services and improving scalability and maintainability.
- Participated in code reviews, automated testing, debugging, and Agile delivery to support application stability and release quality.

Stack: Java, Spring Boot, Spring Data JPA, MySQL, REST APIs, Kafka, Microservices, Docker, Git

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript

Backend: Spring Boot, Spring Web MVC, Spring Data JPA, Hibernate, REST APIs, OpenFeign, Microservices, Async & Scheduling

Security: JWT, Keycloak, RBAC, Custom Servlet Filters, AES-GCM Encryption

Databases & Caching: MySQL, MariaDB, MongoDB, Caffeine

Messaging: Kafka

Testing: JUnit 5, Mockito, MockMvc, JCoCo

DevOps: Docker, Jenkins, Git

AI-Assisted Development: Cursor, Claude

Concepts: System design, microservices, design patterns, DSA, OOP

EDUCATION & CERTIFICATIONS

B.E., Electrical and Electronics Engineering · Chennai, India · Class of 2021

Certification: [Core Java — JetBrains Academy \(Oct 2023\)](#)

Languages: English (professional), Tamil (native)
